- **OUTPUT SCREEN:** - Release option has been changed to Activate and Release .i.e. On Release user need to select the Material Category Vs Project Names. Vendor Names selection option has been removed. On release user need to provide the Approved By and Checked By details. Once released for a particular Material Category and Project, on subsequent release for the same Material Category user won't have the permission to exclude the previously released ProjectName.If user wants to ignore previous Project release validation, please uncheck "Warn for the project existence for release?" and then proceed to release.(Note : Not recommended, use only when necessary).
- **RELEASE SCREEN :- Maintain Exceptions,** two more options has been provided as follows
 1. Get exception list, but replace it with already corrected: - By checking this option, user can get the exception, but if any exception has been cleared and released will get replaced. Those rows will be highlighted with CYAN border.
 2. Revise the corrected exception list: - Once the current exception has been cleared, if user wants to review and change the exception, please check this option and proceed. It will list only the corrected exception list from the current output.
- **OUTPUT SCREEN: - Change Input Data:** - If the particular project has been released, then on change Input Data Screen below entries will be disabled.
 1. PROJECT NO
 2. EQUIPMENT NO
 3. PART NO ALLOCATION
- **EBOM SCREEN:** - Screen shows Material ID column instead of Vendor Name and Compute Date has been added.
- **EBOM SCREEN: - K-Set Details:** - Added Approved By, Checked By, Issued By, Version Date and Rev Details. Revision History has been added for respective K-Set.

Version 2.3. Release Date 29th Jan 2015.

- **Output:** - K-Set Details report Issued By date format has been changed similar to Checked By and Approved By.
- **Create/Change Input :** If Input condition is Not Applicable (NA), the subsequent "True Items" related to that input parameter will set to disabled and will assign the default value.
- Preferred Vendor shows only the NOS Vendors.
- Freeze the preferred vendor and Material Category ID in the computed data. If any change in the backend data will not affect the computed data.
-
